Reports, Dashboards and UI Builder

Aim:

To create reports, dashboards, and customize the user interface (UI) using the UI Builder in Zoho Creator, in order to visualize, analyze, and present application data effectively for end users.

Procedure:

1. Sign in to Zoho Creator

- Open a browser and go to creator.zoho.com.
- Log in with a valid Zoho account.
- Open the application in which the forms and data models have already been created.

2. Creating Reports

- Navigate to the application and click **Add Report**.
- Select the **Form** on which the report should be based (the report pulls data from the associated form).
- Choose the **Report Type**:

List View – displays records in a tabular/grid format.

Kanban View – displays records as cards grouped by a field (e.g., status).

Calendar View – displays date-based records on a calendar.

Map View – displays location-based records on a map.

Timeline View – displays records against a time scale.

Pivot View / Chart View – for summarized/analytical data.

- Give the report a suitable **Report Name**.
- Click **Create**.
- Customize the report:

Select which fields/columns to display.

Apply **Criteria/Filters** to show only specific records (e.g., Status = "Active").

Set **Sorting** order (ascending/descending) based on a field.

Group records using the **Group By** option if required.

Add **Quick Filters** or **Search fields** for end-user convenience.

- Save the report.

3. Creating Dashboards

- Go to the **Dashboards** section of the application and click **Add Dashboard Component**.
- Choose the type of dashboard component:

Chart (Bar, Line, Pie, Column, Donut, etc.)

Aggregate/KPI (single value summary, e.g., Total Sales)

Table/Grid component

- Select the **Data Source** (the form/report on which the dashboard is based).
- Configure the **X-axis and Y-axis** (or grouping and value fields) for the chart.
- Apply filters/criteria if only specific data should be visualized.
- Set the **Title, Color Theme, and Legend** for clarity.
- Arrange multiple components on the dashboard canvas using drag-and-drop to build a complete analytical dashboard.
- Save and preview the dashboard.

4. UI Builder — Customizing the User Interface

- Go to the **Pages** section and click **Add Page** (or use the built-in UI Builder).
- Choose a **Blank Page** or a suitable **Page Template**.
- Use the **drag-and-drop UI Builder** to add components onto the page
 - Forms (to allow data entry)
 - Reports (to display records)
 - Dashboard components (charts/KPIs)
 - Static elements: Text labels, Images, Buttons, Menus, Tabs
- Arrange the components using the grid layout for a clean, responsive design.
- Set **actions/navigation** for buttons (e.g., link a button to open a form or navigate to another page).
- Customize the theme: colors, fonts, logo, and header/footer, to match branding requirements.
- Set **access permissions/roles** to control which users can view/edit each page or component.

5. Preview and Test

- Click **Preview** to view the reports, dashboard, and custom pages as an end user would see them.
- Test filters, sorting, navigation buttons, and links to confirm they function as intended.
- Check the dashboard/report on different devices (desktop/mobile) for responsiveness.

6. Publish/Deploy

- Once verified, click **Publish** to deploy the application.
- Share the application link or grant user access so that end users can view reports, interact with dashboards, and use the custom UI pages.

Result:

Thus, reports and a customized user interface were successfully created and configured in Zoho Creator using the UI Builder. Various report views (List, Kanban, Calendar) and a user-friendly custom UI page with proper navigation, theming, and access control were designed, tested, and deployed successfully.
